Wang Pi

(Seeking 2021 full time position in software engineering)

(858)-210-1190 wapi@ucsd.edu linkedin.com/in/wangpi github.com/AlbertPi-Git

EDUCATION

University of California, San Diego — **La Jolla, CA**
M.S. Computer Science, GPA:3.71/4 — *Sept 2019 – Dec 2020 (Expected)*

Peking University — **Beijing, China**
B.S. Electronic Engineering, GPA:3.74/4 — *Sept 2015 – Jul 2019*

EXPERIENCE

Advanced Communication Lab Research Intern, Peking University *Feb 2019 – Jun 2019*

- Worked on unsupervised malicious user detection in cooperative localization in the vehicular networks.
- Proposed an sequential clustering detection algorithm to identify users that send bogus location observations.
- Validated detection accuracy improvement and computation efficiency with full simulation in **MATLAB**.

System Energy Efficiency Lab Research Intern, University of California, San Diego *Jul 2018 – Sept 2018*

- Worked on a novel learning framework for embedded systems: binary hyper dimensional (BinHD) computing.

TECHNICAL SKILLS

- Programming Languages: **Python, C/C++,MATLAB** [Familiar]
- Tools & Environment: **Socket, XMLRPC, Linux, Git, Vim**[Familiar], **LLVM** [Basic]

PROJECTS

Surfstore

- Implemented a distributed fault tolerant file synchronizing service that supports version control and multi-clients concurrent accessing. Deployed it on AWS EC2 in a small scale and conducted various testing.
- Client-server communication is implemented with **XMLRPC** in **Python**. Fault tolerance implementation on the server cluster is based on **RAFT** consensus protocol.

Cat Camera

- Implemented a photography app demo that can detect cat faces and add decorations automatically. Frontend is developed with **HTML** and **Javascript**. Image processing module on backend server is based on **Python** and **Tensorflow**. Client-server communication is achieved with Express framework in **Node.js**.

Web Server using HTTP 1.1 protocol

- Implemented a multi-threading web server based on **C++** socket API. It responses GET requests from multiple clients concurrently and supports long time connection and pipeline requests to improve the efficiency.

LLVM Dataflow Analysis

- Implemented a dataflow analysis framework based on lattice theory in **LLVM**. Based on that framework, developed analysis passes to dynamically analyze the branch bias information of programs during runtime and statically analyze the reaching definitions and liveness of variables.

PUBLICATIONS

- **W. Pi**, P. Yang, D. Duan, C. Chen, X. Cheng, L. Yang, "Malicious User Detection for Cooperative Mobility Tracking in Autonomous Driving", IEEE Internet of Things Journal (Top journal, impact factor 9.515).

SELECTED AWARDS

- Excellent Graduate Student of Peking University (Top 10%) — Jul 2019
- Merit Student of Peking University (Twice, top 10%) — Sept 2017, 2018
